

PARTNERS IN PUBLIC SAFETY

PRESS RELEASE

M/A-COM and ComGroup Australia have joined forces to provide flexible and scalable system solutions for Public Safety sectors in Australasia.

The innovative partnership offers Public Safety organisations a complete solution for mission critical infrastructure and terminals using P25 technology.

By utilising industry standard IP, existing legacy equipment and systems can seamlessly integrate with P25 technology. This enables user groups to employ their preferred radio technology, while being united under a single architecture. For example, in a multi-agency operation, staff on a fire site operating in VHF analogue mode can communicate with police operating in UHF P25 mode.

M/A-COM's infrastructure provides a unique blend of integrated technologies including P25^{IP} for Voice & Data Operation and NetworkFirst for interoperability with legacy or other radio systems. The ability to combine these technologies into one system is achieved through M/A-COM's VIDA (Voice, Interoperability, Data, Access) concept, which acts as a link between the technology of today and tomorrow.

ComGroup Australia has a reputation for delivering high-end complex radio solutions such as trunked/conventional radio, P25 terminals and infrastructure, simulcast/voting and AVL/Mobile Data. The ability to make highly flexible customer specific systems lies in ComGroup's capacity to design across a range of technologies, products, materials and standards.

Simoco's product innovation is well known and their mobile and portable radios offer the marketplace a high performance, locally supported range of multimode communication products. The introduction of Simoco's DSP mobile more than 8 years ago resulted in the mature platform for today's P25 digital communications.

With highly skilled teams, this joint venture offers local in-house integration and support for your entire infrastructure, mobile and portable needs.

Please visit our stand at the APCO Australasia 2007 Conference and Exhibition for the opportunity to experience this innovative and exciting P25IP solution.
